

Summary of the activities of September 2011 in Salavan TTC

Japan Overseas Cooperation Volunteer Ms. Asuka MOMIYAMA

1. What I did

1) Observation Class

- ① Multiple teaching method (Elementary Year2)
- ② Action research(Year3)
- ③ Technique of computer (Year3)
- ④ Junior high school curriculum (Math Year2)
- ⑤ Investigate mathematic(Year3 Math)
- ⑥ Teaching method of science(Year2)
- ⑦ Science(Elementary Year1)
- ⑧ English(English Year2)

I observed many classes. It is difficult for me to understand contents of lecture of Lao language. But I feel teachers teach in earnest and most of students listen carefully. I wonder why teachers don't use textbook.

In some lectures I introduced a games of calculator "How much is this? Add up and subtract!" and put some math question for students.

2) Training teaching skill of student

• Science and Mathematic

Mr.Supan, Mrs.Suliphone and I discussed about how to do training teaching skill, and selected contents for teaching of science.

3) Advice for cleaning in the laboratory

① Adjustment of microscope

In the laboratory there are 5 microscopes. I cleaned and adjustment the microscopes. 3 microscopes can use, but 2 microscopes can't use. Because one that has no mirror, only electric light broken a cord of light. The other microscope has no eyepiece lens. If you buy the object lens, a lens with a magnifying power of 10 is best.

② Advice put things of laboratory in order

4) Studying Lao language

• Reading skill with Mrs. Lipder phuagpatom

I read a textbook of world around us year2 and year3, and asked the meaning of words and pictures. I learned pronunciation of words.

• Self studying

I read textbook of world around us and look up a word in a dictionary.

5) Others

- Making reports for JICA
JOCV must write about own activity every 3 months. example how about the area and the office, what kind of problems they have,
- Preparation of Science festival at Savannakhet TTC
I'll take part in Science and Math festival in Savannakhet TTC on October 4th. In the festival JOCV introduce activities of mathematics. I prepared questions, cards and words of Lao we use.

2. Impression

1) Good thing

- ① Many teachers and students speak and teach to me kindness, and try to understand for me. I'm glad that.
- ② I know curriculums of Saravan TTC little by little, result of observation class and teachers teach it me.
- ③ We had a ceremony "basi". Teachers of science office helped me and took part in. I had a special time. I was very pleased.

2) Problem

- ① I have a class of training for students of science. Schedule of TTC, I would teach Thursday afternoon. But we couldn't use a classroom. And students are too much.
- ② I can't understand that teachers and students talk what about. I can't tell about that I think about in Lao language.

3) Solution

- ① We could use on Friday afternoon. It is better that to separate class of elementary course and junior high school.
- ② I have to study Lao language more.

3. What I want do

- I want to make a plan for Training teaching method of students. I want to introduce teaching method and material of Japanese, and consulted with science teachers about lesson plans.
- I want go to see a class of elementary schools in saravan. It is important for teaching student to see how matters stand.
